

The AI-Visibility Checklist

Seven checks to see if AI will recommend your brand — and the fix for each. Run it on your own site in ten minutes.

1. Your words are real text — not trapped in images or PDFs.

Fix: Put product descriptions, specs, and your story on the page as text you can highlight.

2. Your site loads real content — nothing walls it off.

Fix: Skip heavy drag-and-drop builds and full-screen age gates that hide everything from crawlers until someone clicks.

3. You answer the questions buyers actually ask, in writing.

Fix: Cover the specifics — what's in it, where it's from, how to buy, how the subscription or club works.

4. Your brand name is identical everywhere.

Fix: Match it across your site, the retailers and directories that carry you, and Google.

5. Your pages carry structured data (the “hidden labels”).

Fix: Ask whoever runs your site to add structured data for your brand, products, and reviews.

6. You've earned mentions AI already trusts.

Fix: Press coverage, a real presence on the review sites and marketplaces in your category, and genuine reviews.

7. Ask ChatGPT “recommend a [your category] like [a competitor]” — are you named?

Fix: If not, work checks 1–6. That's what puts you in the answer.

Scored low? That's fixable — and it has almost nothing to do with your budget.
